Group: 94

Names: Lena Bruin (1748106) & Dogaru Cezar (2492806)

Advanced topics: Github & multithreading

#	Name	How to	Notes
1	Make map	Launch app, new game, map is displayed	Shows the map and relevant things within the map (asteroids, money counter, point counter and possible upgrades)
2	Add player	Launch app, new game, press arrow keys and player should move accordingly and the player shoots automatically	The player should be able to control the character's movement
3	Make enemies	Launch app, new game, enemies exist	Moving asteroids (on a random line), damage is dealt to the player when it hits them, damage done by the asteroids, and health of the asteroids increases as the game progresses
4	Implement lose condition	Launch game, new game, when enemies kill you a lose screen appears	When health reaches 0 or below then the game is over
5	Add money to the game	Launch app, new game, current money amount is displayed	When enemies are killed then the money that the player has increases (which will then be spent on upgrades)
6	Make upgrades	Launch app, new game, earn money, spend money on upgrades, improvements are shown	Adds upgrades to the game (money earned from killing asteroids, shooting speed, shooting damage, more health and damage to asteroids)
7	Point counter	Launch game, new game, point counter shown, point counter goes up when points are earned	As the game progresses then the total amount of points increases
